

PhycoSci X¹⁴

MICRONUTRIENTS YOUR BODY NEEDS

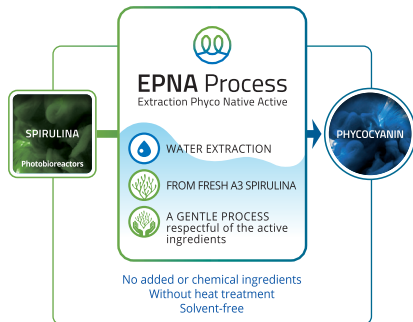

Xelliss.

OUR A3-PhycoBlue EPNA EXTRACTION PROCESS

By a dedicated technological approach, Xelliss has created its extraction process called EPNA (Phyco Native Active Extraction) which makes it possible to obtain a superior quality and highly concentrated phycocyanin, resulting from a culture in photobioreactors.

Xelliss carries out the spirulina extraction, cultivated according to its own process, which is very efficient. This cold process does not use any chemical solvent, the extraction is done with water and makes it possible to solubilize phycocyanin, one of the essential active nutrients.

PhycoSci X¹⁴ is for people who want to provide their body with a natural source of antioxidants, protect themselves from the harmful effects of oxidative stress while supporting their immunity!

WHY ?

We know that healthy eating is not enough, especially when leading an active and full life.

We are all very busy and it is not always easy to properly meet our nutritional needs in order to stay healthy.

This is why Xelliss is a pioneer in the spirulina vertical farming, a microalgae, making its dietary supplements of very high quality and unique.

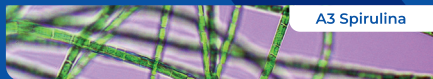

HOW ?

PhycoSci X¹⁴ is produced from our high quality A3 Spirulina which is naturally very rich in phycocyanin. Phycocyanin is a cyan-blue colored protein specific to spirulina. It plays an antioxidant role in the cellular structure of the spirulina microalgae.

Phycocyanin is one of the active phyto-nutrients in spirulina that boosts the immune system.

A3 Spirulina

Spirulina is a microalgae (family of cyanobacteria). A true superfood, spirulina is one of the richest sources of nutrients and micronutrients that nature offers us. It is in particular a formidable source of various carotenoids, proteins, minerals and vitamins.

A3 Spirulina

A3-PhycoBlue

Spirulina is a photosynthetic freshwater organism. Naturally in contact with many oxidizing elements during its development, this microalgae produces a wide variety of antioxidant compounds to protect itself from these very aggressive growth conditions.

In its desire to offer premium quality products, Xelliss has chosen to have its **PhycoSci X¹⁴** labelled by "**Sport-Protect**". This label guarantees sportsmen and women safety of use within the context of their disciplines, irrespective of their levels. In compliance with the antidoping standard NF EN 17444.

A3-PhycoBlue

THE FORMULA

It is necessary to have full energy and good endurance, **PhycoSci X¹⁴** prepares your body to face the day.

IMMUNITY

REDUCES
FATIGUE

ENERGY
AND VITALITY

NO ADDED
SUGAR

SUITABLE FOR
VEGANS
